

NPRE560: Reactor Kinetics and Dynamics

University of Illinois, Urbana-Champaign

Fall 2024

Instructor: Prof. Kathryn Huff

Time: MW 1:00pm– 2:50pm

Email: kdhuff@illinois.edu

Place: 305 Materials Science & Engineering Building

Course Pages:

1. <https://canvas.illinois.edu>
2. <https://github.com/katyhuff/NPRE560>
3. <https://classroom.github.com/NPRE5XX/NPRE560>

Office Hours: Prof. Huff will hold office hours by appointment only. Please make an appointment at katyhuff.youcanbook.me. If possible, please plan to meet in her office, 118 Talbot Laboratory at 104 S. Wright St. If an in-person meeting is impossible, please request a Zoom meeting. While your work should be based on independent work, collaboration is allowed, so, if your colleagues might be helpful, please discuss your questions with them directly before scheduling office hours.

Main References: A few essential references for this course will be assigned as readings and will be the source of homework problems. The key texts for this course are [1] and [2]. I also recommend [3], [4] and [5] for conceptual review as well as [6] for computational methods details.

- [1] Karl O. Ott and Robert J. Neuhold. *Introductory Nuclear Reactor Dynamics*. Amer Nuclear Society, La Grange Park, Ill. USA, December 1985. 1
- [2] David L. Hetrick. *Dynamics of Nuclear Reactors*. Amer Nuclear Society, La Grange Park, Ill., USA, November 1993. 1
- [3] Weston M. Stacey. *Nuclear reactor physics*. Wiley. com, 2007. 1
- [4] George I. Bell and Samuel Glasstone. *Nuclear Reactor Theory*. Van Nostrand Reinhold Company, New York, 1970. 1

- [5] James J. Duderstadt and William R. Martin. *Transport Theory*. Wiley, New York, 1979. 1
- [6] Elmer E. Lewis and Warren F. Miller Jr. *Computational Methods of Neutron Transport*. American Nuclear Society, La Grange Park, Ill, 2nd edition edition, January 1993. 1

Objectives:

- Incorporate delayed neutrons into diffusion and transport neutron balances
- Develop the point reactor kinetics equations
- Apply, analytically and numerically, the point reactor kinetics equations
- Apply space dependent, energy dependent, multigroup reactor kinetics
- Understand and interpret reactivity measurements
- Analyze dynamics via reactor noise
- Interrogate advanced topics
- Engage critically with original kinetics and dynamics research

Prerequisites:

- NPRES455 or equivalent (required)
- NPRES555 (desired, but optional)

Grading Policy: Grades will be assigned as a weighted sum of the following work. Approximately 5 homework assignments, 3 computational projects, and occasional engagement with the literature (journal club activity) will comprise the grade.

Homework: There will be a small number of homework assignments throughout the semester, approximately one every three weeks.

Computational Projects: The computational projects will be submitted via GitHub Classroom and will be spaced evenly through the semester. The final project will be presented during the time reserved for this course's final exam.

Journal Club: A small library of original research papers will be provided for students to engage with. All students will be asked to submit short reviews of the papers. Individual students will each be assigned to present a review and summary of at least one of these papers to the class (15 minutes) over the course of the semester. Participation in class discussion during this activity by the student audience will constitute a fraction of the awarded grade for this activity.

Important Dates:

Project 1 Oct 7, 2024
Project 2 Nov. 11, 2024
Final Project 7:00-10:00pm, December 18, 2024

Work	Weight
Journal Club	(20%)
Homework	(20%)
Project 1	(20%)
Project 2	(20%)
Final Project	(20%)
Total	(100%)

Class Policies:

Integrity: This is an institution of higher learning. You will be swiftly ejected from the course if you are caught undermining its integrity. Note the [Student's Quick Reference Guide to Academic Integrity](#) and the [Academic Integrity Policy and Procedure](#).

Attendance: Regular attendance is mandatory. Request approval for absence for extenuating circumstances prior to absence.

Electronics: Active participation is essential and expected. Accordingly, students must turn off all electronic devices (laptop, tablets, cellphones, etc.) during class. Exceptions may be granted for laptops if engaging in computational exercises or taking notes.

Collaboration: Collaboratively reviewing course materials and studying for exams with fellow students can be enriching. This is recommended. However, unless otherwise instructed, homework assignments are to be completed independently and materials submitted as homework should be the result of one's own independent work.

Late Work: Late work will not be accepted. Plan ahead.

Make-up Work: There will be no negotiation about late work except in the case of absence documented by an absence letter from the Dean of Students. The university policy for requesting such a letter is in [the Student Code](#). Please note that such a letter is appropriate for many types of conflicts, but that religious conflicts require special early handling. In accordance with university policy, students seeking an excused absence for religious reasons should complete the [Request for Accommodation for Religious Observances Form](#). The student should submit this form to the instructor and the Office of the Dean of Students by the end of the second week of the course to which it applies.

Grade Disputes: It is important that you understand and agree with the grade you receive on assignments and exams. If you would like to dispute your score, you must send an explanation by email to Prof. Huff within one week of receiving the grade. **Do not expect me to regrade anything while in conversation with you** as that would not be fair to the other students in the class, whose homeworks were graded without them present. If you request a regrade, be aware that the entire assignment will be regraded and is subject

to double-jeopardy: it is possible that your score will go down. Regrade requests should be based on an error on my part (e.g., adding up the points incorrectly) or what you suspect is a misunderstanding of your work (e.g., arriving at the correct answer using an unexpected technique). Regrade requests that argue with the rubric (e.g., “this is wrong, but you took too many points off”) will be returned without consideration. **Your work should stand alone.** If an assignment is disorganized or ambiguous, and requires an extensive explanation to the grader, you will likely still lose points. The homeworks not only evaluate your understanding of the material - they also evaluate your ability to communicate that understanding clearly and concisely.

Accessibility: I hope that this course will be inclusive and accommodating for all learners. As such, I am committed upholding the vision and values of [Inclusive Illinois](#) in my classroom. With regard to accommodating all learners, please note that many resources are provided through [the Division of Disability Resources and Educational Services](#). To request particular accommodations, please contact me as soon as possible so that we can work out any necessary arrangements.

Safety: Emergencies can happen anywhere and at any time, so it’s important that we take a minute to prepare for a situation in which our safety could depend on our ability to react quickly. Take a moment to learn the different ways to leave this building. If there’s ever a fire alarm or something like that, you’ll know how to get out and you’ll be able to help others get out. Next, figure out the best place to go in case of severe weather - we’ll need to go to a low-level in the middle of the building, away from windows. And finally, if there’s ever someone trying to hurt us, our best option is to run out of the building. If we cannot do that safely, we’ll want to hide somewhere we can’t be seen, and we’ll have to lock or barricade the door if possible and be as quiet as we can. We will not leave that safe area until we get an Illini-Alert confirming that it’s safe to do so. If we can’t run or hide, we’ll fight back with whatever we can get our hands on. If you want to better prepare yourself for any of these situations, visit police.illinois.edu/safe. Remember you can sign up for emergency text messages at emergency.illinois.edu. This [one-page-handout](#) discusses the Illinois Run-Hide-Fight strategy.

Other Resources: University students typically experience a wide range of stressors during their time on campus. Accordingly, campus resources exist to help students manage stress levels, mental health, physical health, and emergencies while navigating this environment. I hope you will take advantage of these campus resources as soon as they can be of help.
